

## Gender-affirming facial surgery

### What is GAFS?

The Gender-affirming facial surgery program at GrS Montréal offers a number of surgical procedures designed to soften the face and neck to give them a more typically feminine appearance.

Procedures include forehead, mandible, lips, cheekbone, Adam's apple and nose surgery.

### Access to surgery process

- Completed and signed medical **questionnaires** and GAFS surgical expectations questionnaire, plus photos of the face.
- For forehead or mandibular surgery, we will provide you with a request to make an appointment for a **CT scan** of the face. We must receive the results before the consultation with the surgeon. However, this test does not guarantee that the desired procedure(s) can be performed.
- Although not mandatory, it is recommended to be on **hormone therapy** for 6 to 12 months prior to these procedures.
- **No letter of recommendation** is required by our team.
- Once we have received all the documents, photos and CT scan results, we will contact you to schedule a consultation with the surgeon.

Contact us to obtain  
information documents and  
questionnaires.

## Gender-affirming facial surgery

### Expected cost

- Surgical fees vary according to the procedures required.
- When several procedures are scheduled at the same time, a discount is applied. You will receive a quote once the surgical plan has been finalized with your surgeon.
- The cost of the initial consultation is \$100 or \$150, depending on the desired procedures. Depending on the type of surgery planned, further consultations may be required, at additional cost.
- CT scan fees, if any, are not reimbursed or deducted from the cost of surgery.
- If you are having forehead surgery and live more than 200 km from the hospital, you will need to stay close to the CMC for an additional five days following your hospitalization. We can arrange for you to stay at our partner hotel, or you can book your own stay at a location of your choice.
- Each province and territory has its own funding program for gender-affirming surgery, and some may fund facial surgery. You can find specific information from the Ministry of Health in your province, state or country. Insurance programs also offer funding for these procedures: check with your group insurance provider.
